

P.003/005

## Clean Version of the Amended Claims

65. A telecommunications sale system comprising:

a plurality of buyers;

a plurality of sellers;

CPO MANAGEMENT SYSTEM 100

a network site/connected to a server node for receiving sell and purchase orders from the sellers and buyers, respectively, for telecommunications services, each of said sell and purchase orders specifying a class of service; and

means for matching the sell and purchase orders and brokering a transaction of telecommunications service, on the basis of at least one of the specified classes of service.

- 66. The system of claim 65, further comprising an interconnection node between a seller telecommunication network and a buyer telecommunication network so as to enable a buyer to use telecommunications service purchased from a seller.
- 67. The system of claim 66, wherein said interconnection node is connected to said server node through a communication line and receives instructions from said server node for connecting said buyer and said seller telecommunications networks.
- 75. The system of claim 65, wherein said at least one of the specified classes of service includes Answer Seizure Ratio.
- 76. The system of claim 65, wherein said at least one of the specified classes of service includes Post Dial Delay.
- 77. The system of claim 66, wherein said interconnection node includes a quality monitoring equipment.
